Practice 2 M01
Municipal Water Quality SDP Pipeline

Taskwise screenshot submission template

Trainee name: Soumiya Ayyappan

Candidate ID: 10877547

Existing catalog: cat_ltm10877547

Date: _____

Schema: practice_2. Volume: p2_m01_files.

Submit only the named taskwise screenshots in the matching template. Code and output have separate slots whenever both are required. A code-only slot does not require output in the same image. Capture existing results; do not rerun mutations for screenshots. No notebook submission or executable SQL validation is required.

Task and screenshot allocation

Task	Title	Marks	Images
1	Prepare the files and pipeline	3	1
2	Define the raw Bronze dataset	4	1
3	Define the cleaned Silver dataset	6	1
4	Run the pipeline and check both layers	4	1
5	Summarize clean water readings by zone	3	1

Total required screenshots: 5. Each following page identifies the exact task, filename and visible evidence for its image.

Task 1 image A Setup UI

Prepare the files and pipeline

P2_M01_T01_A.png

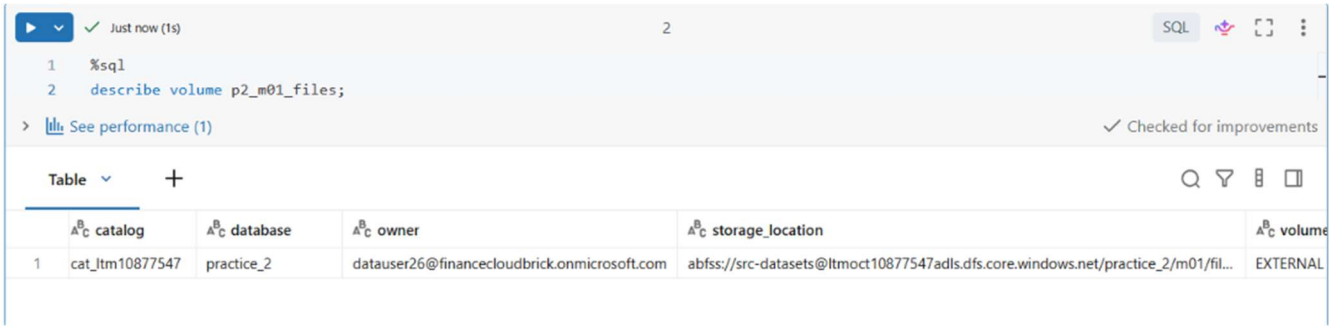

Volume view showing catalog, practice_2, volume name, EXTERNAL type, assigned child URI and input files. Use the volume details panel beside the file list where available.

This is image 1 of 1 required for Task 1.

Expected result

The external volume uses your assigned location. All listed files are inside input.

INSERT THE SCREENSHOT FOR P2_M01_T01_A.png HERE

Task 2 image A Bronze code

Define the raw Bronze dataset

P2_M01_T02_A.png

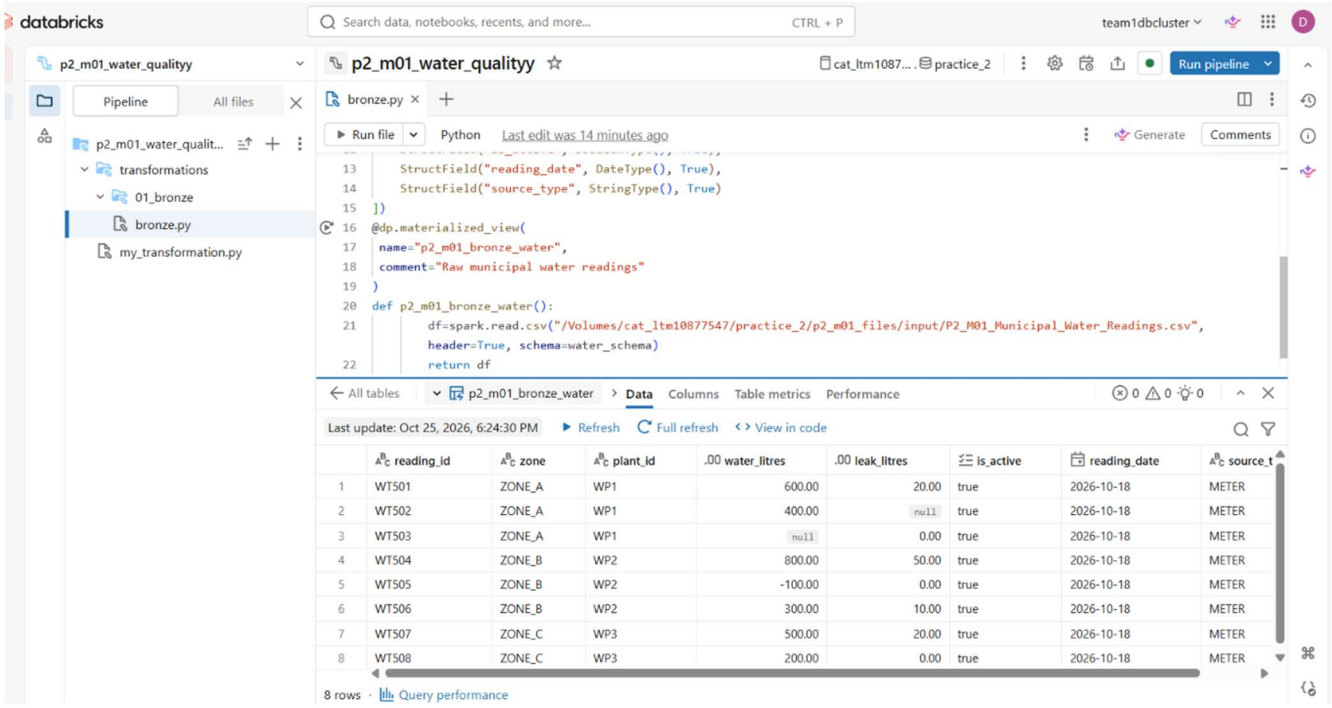

The complete Bronze definition, imports, source path and declared types. Output is checked after execution.

This is image 1 of 1 required for Task 2.

Expected result

Bronze keeps eight source rows and eight source columns.

INSERT THE SCREENSHOT FOR P2_M01_T02_A.png HERE

Task 3 image A Silver code

Define the cleaned Silver dataset

P2_M01_T03_A.png

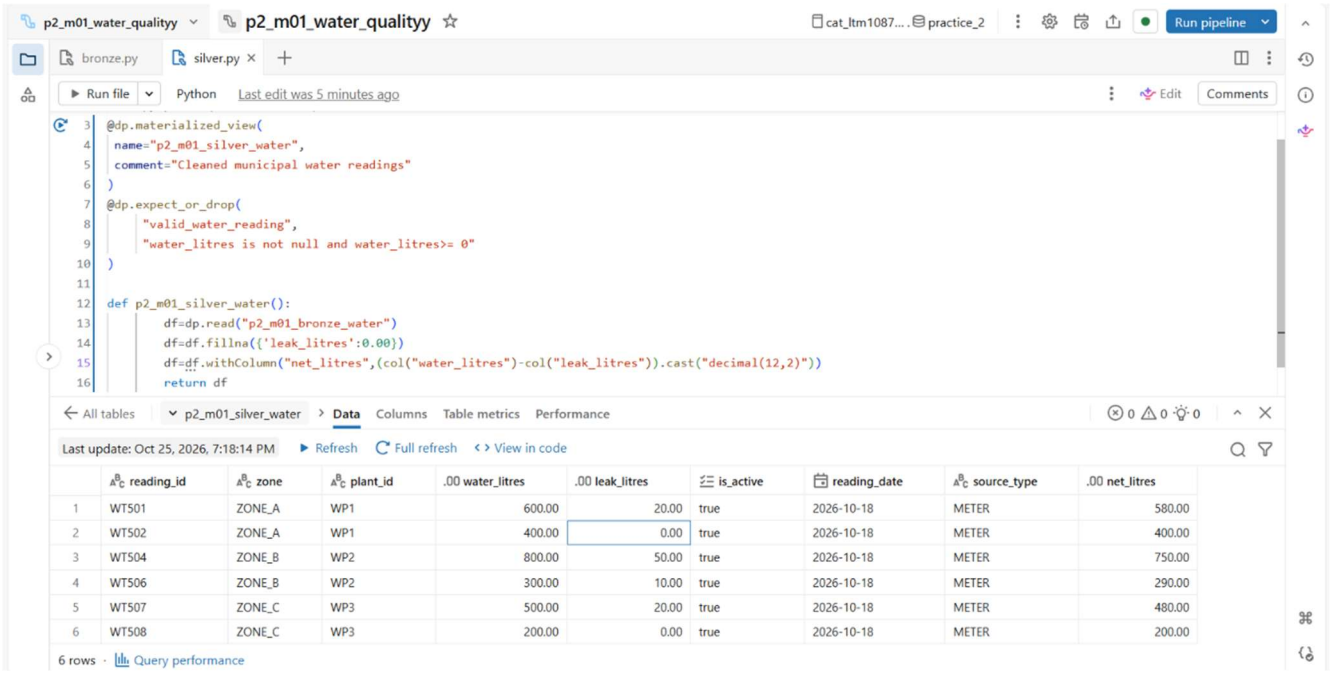

The complete Silver definition with its dependency, drop expectation, leakage replacement and net_litres calculation.

This is image 1 of 1 required for Task 3.

Expected result

Silver has nine fields and six valid rows. WT503 and WT505 are dropped. WT502 leakage becomes 0.00.

Task 4 image A Pipeline result

Run the pipeline and check both layers

P2_M01_T04_A.png

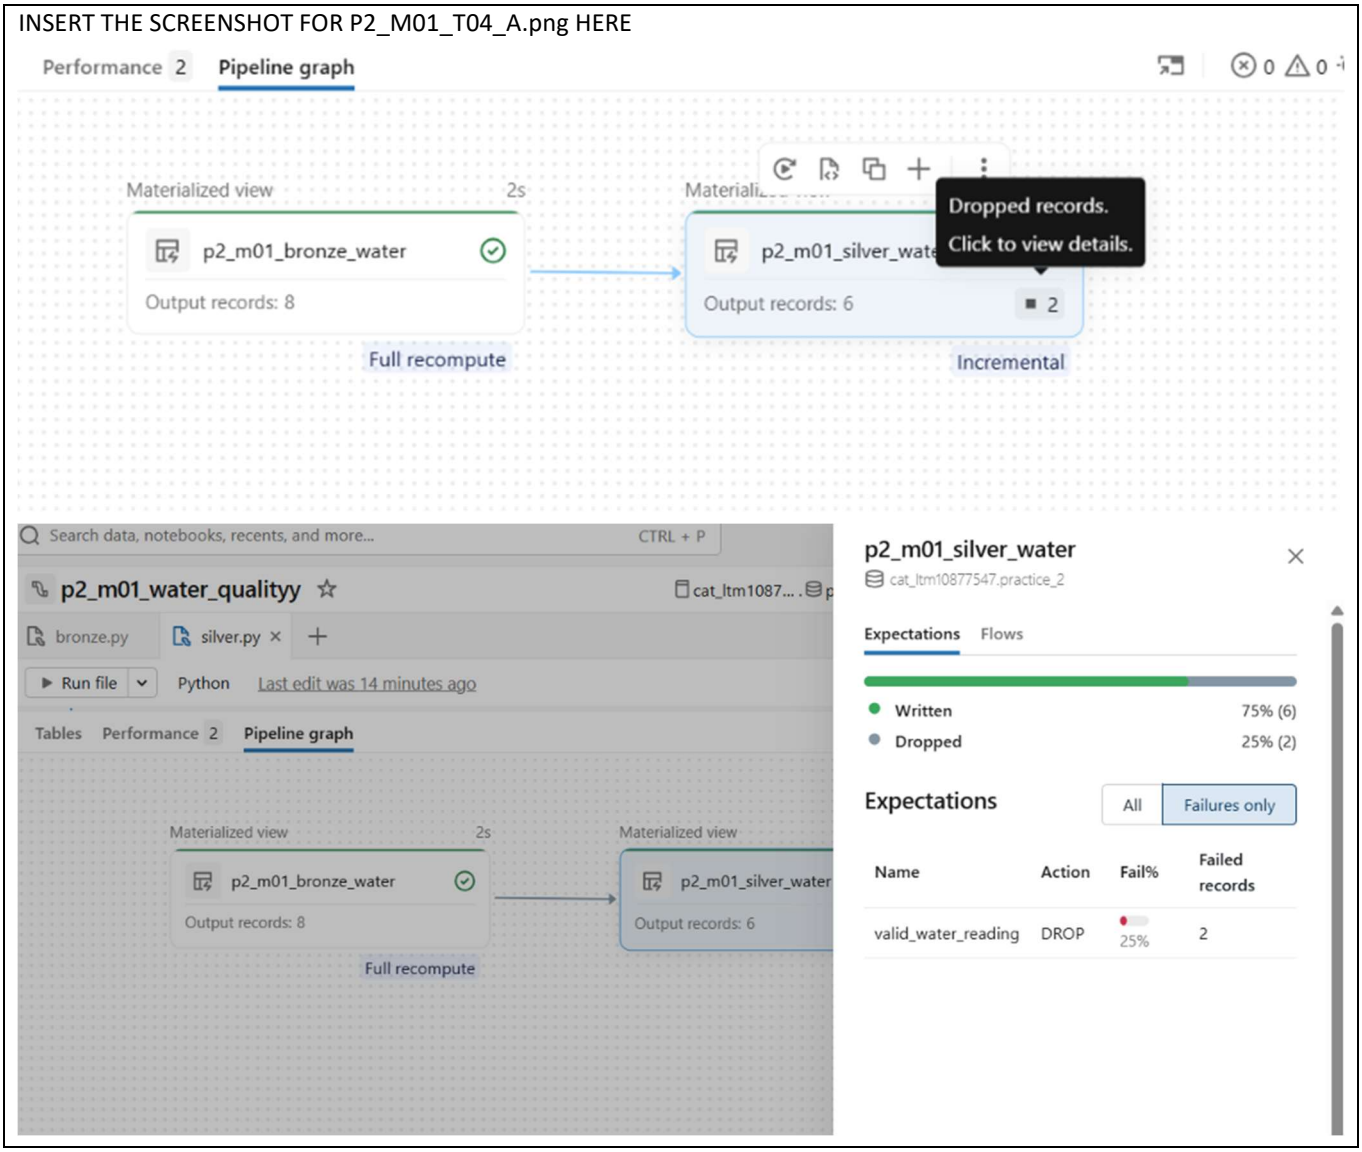

Completed pipeline graph with its name, destination, Bronze 8, Silver 6 and dropped count 2. Use the quality/details panel as needed.

This is image 1 of 1 required for Task 4.

Expected result

Completed pipeline. Bronze 8 rows; Silver 6 rows; 2 invalid rows dropped.

Task 5 image A Zone output

Summarize clean water readings by zone

P2_M01_T05_A.png

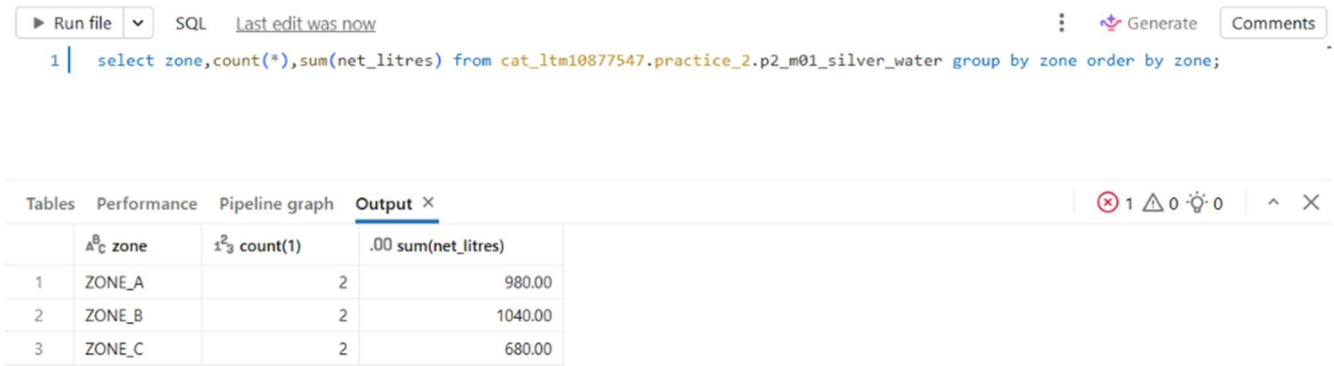

Three ordered zone rows with record_count and total_net_litres from the saved Silver dataset.

This is image 1 of 1 required for Task 5.

Expected result

ZONE_A 2 / 980.00; ZONE_B 2 / 1040.00; ZONE_C 2 / 680.00.

INSERT THE SCREENSHOT FOR P2_M01_T05_A.png HERE

	zone	count(1)	sum(net_litres)
1	ZONE_A	2	980.00
2	ZONE_B	2	1040.00
3	ZONE_C	2	680.00
